American Journal of Physiology (consolidated)

The consolidated American Journal of Physiology (AJP) ranks as one of the most frequently cited publications among all physiology journals listed in the Journal Citation Index. Published in two monthly volumes by The American Physiological Society, the consolidated AJP brings you approximately 2,700 articles encompassing over 22,000 pages annually.

The consolidated edition of the AJP provides comprehensive coverage of the latest research published in these important specialty journals:

- Cell Physiology
- Endocrinology and Metabolism
- Gastrointestinal and Liver Physiology
- Lung Cellular and Molecular Physiology
- Heart and Circulatory Physiology
- Regulatory, Integrative and Comparative Physiology
- Renal Physiology

As your comprehensive source for the full spectrum of current physiological research at a single low subscription price, the consolidated AJP is an unbeatable value.

Benefits

- Perpetual/Electronic Archiving—The consolidated AJP is part of LOCKSS and CLOCKSS.
- Counter-Compliant Usage Statistics—Online access to counter-compliant usage data is available to all institutional subscribers.
- Reference Linking—The consolidated AJP participates in CROSSREF, a reference linking service that turns citations into hyperlinks, allowing researchers to navigate online literature at the article level.
- Fully Searchable Text—Fully searchable text is available, including PubMed.
- Advance Tables of Contents & CiteTrack—Sign-up for e-mail notification of advance tables of contents and new articles matching a search criteria of your choice.
- Articles in Press—Accepted research papers are published online within a few days after their acceptance.

AuthorChoice

Authors can choose to pay a fee on top of regular author fees and have their article made free immediately ($2,000 for research articles and $3,000 for review articles).
Physiological Genomics

Call for Papers
Physiological Genomics

Technology Development for Physiological Genomics

Physiological Genomics is soliciting manuscript submission that describe the development and/or use of novel technologies in physiological genomics research. It is well recognized that the application of innovative technology has been of major importance to advancements in this field. The early years of this journal coincided with the development of genome-wide techniques and the initial entry of physiologists into the discipline of genomics. The journal has historically published articles that deal with microarray analysis and has led the way in helping to define standards for experiments and publication of microarray results. Physiological Genomics is now interested in embracing the opportunities created by the emergence of new disciplines such as proteomics, metabolomics, next-generation sequencing, modeling, and systems approaches and desires to provide an outlet for studies that explore novel methodologies in these and other fields that will become part of the accepted toolbox of future physiologists.

The “Innovative Methodology” article type is especially well suited to this sort of publication although submissions in all categories will be considered.

For any specific queries please contact the Editor-in-Chief, Andy Greene (E-mail: agreene@mcw.edu).
**Call for Papers**

**Physiological Genomics**

Functional Analysis of Sequence Variation

*Physiological Genomics* is soliciting manuscript submissions that focus on the analysis of the functional implications of genomic sequence variation. Papers that are responsive to this call can be in any category but will focus on methods and/or research studies that aim to attach physiological relevance to alterations in genes or proteins. Studies should attempt to attach significance to genome deletions, duplications, and single nucleotide polymorphisms and may be undertaken in humans or model organisms, in vitro or in vivo. Theoretical approaches to analysis of sequence variation will also be considered responsive.

For any specific queries please contact the Editor-in-Chief, Andy Greene (E-mail: agreene@mcw.edu).

**Call for Papers**

**Physiological Genomics**

Computational Modeling of Physiological Systems

*Physiological Genomics* is soliciting original research papers in the area of computational modeling of physiological systems. It is acknowledged that in the coming years, computational modeling and analysis will play a critical role in deciphering large-scale data and developing a systems understanding of biological systems. In particular, the journal is interested in studies that use computational analyses in the context of gene function in physiological systems.

For any specific queries please contact the Editor-in-Chief, Andy Greene (E-mail: agreene@mcw.edu).
Annual Reviews offers comprehensive, timely collections of critical, topical reviews written by acknowledged experts. Annual Reviews journals examine 40 focused disciplines within the Biomedical, Life, Physical, and Social Sciences, including Economics. Our Editorial Committees are specialists in selecting and synthesizing literature into concise, insightful review articles. As a result, Annual Reviews journals are among the most highly cited in scientific literature and are consistently ranked within the top ten of journals for their disciplines as indexed by the ISI® Journal Citation Reports (JCR®).

**Annual Review of Physiology**
Volume 72, March 2010 • Available Online & In Print • ISSN: 0066-4278 • ISBN: 978-0-8243-0372-3

**Editor:** David Julius, California State University, San Francisco

**APS Price (WORLDWIDE):** $71.20
**Regular Personal Price (WORLDWIDE):** $89

Access online now at http://physiol.annualreviews.org

---

**Annual Review of Genomics and Human Genetics**
Volume 11, September 2010 • Available Online & In Print • ISSN: 1527-8204 • ISBN: 978-0-8243-3711-7

**Co-Editors:** Aravinda Chakravarti, Johns Hopkins University, School of Medicine
Eric Green

**APS Price (WORLDWIDE):** $67.20
**Regular Personal Price (WORLDWIDE):** $84

Access online now at http://genom.annualreviews.org

---

**Annual Review of Genetics**
Volume 44, December, 2010 • Available Online & In Print • ISSN: 0066-4197 • ISBN: 978-0-8243-1244-2

**Editor:** Allan Campbell, Stanford University

**APS Price (WORLDWIDE):** $67.20
**Regular Personal Price (WORLDWIDE):** $84

2010
American Physiological Society Conferences

APS Intersociety Meeting: Global Change and Global Science: Comparative Physiology in a Changing World

Date & Location:  August 4-7, 2010
Westin Westminster Hotel, Westminster, Colorado

Abstracts Due:  May 3, 2010  Advance Registration:  June 25, 2010

Preliminary Program:

- The Role of Physiology in Organismal Responses to Global Warming
- Off the Beaten Path: Integrative Aspects of Muscle Function During Diverse Locomotor Behaviors
- Hydration, Desiccation, Regulation: The Comparative Physiology of Water Balance
- Physiological Effects of Ocean Acidification on Marine Animals in Times of Ocean Warming: Ecosystem Implications
- Evaluating the Effects of Global Climate Change to the Fauna of South American Biomes: Consequences to Diversity from a Physiological Perspective
- Environmental Adaptations of Cardio-Respiratory Systems
- Putting Comparative Physiology to Work in the Field: Stable Isotopes as Tracers of Ecological Processes
- Genomics and Proteomics Approaches to Understanding Environmental Stress
- The Life History Physiology Nexus
- The Physiology of Trace Metal Homeostasis and Toxicity
- Global Change and the Emerging Threat of Dead Zones: Can Individuals, Populations, Species, and Communities Respond to Increasingly Hypoxic Oceans?

For more info or to register, visit:
www.the-aps.org/comparative

APS Conference: Inflammation, Immunity and Cardiovascular Disease

Date & Location:  August 25-28, 2010
Westin Westminster Hotel, Westminster, Colorado

Abstracts Due:  May 14, 2010  Advance Registration:  July 23, 2010

Preliminary Program:

- Basic Aspects of Immunology
  - Basic Aspects of T Cell Function
  - How to Measure and Study Immune Responses
  - Events in the Lifespan of a T Cell
  - Cytokines and the Use of Cytokine Directed Therapy
  - Roles of NK and NKT Cells during Early Lesion Formation
- Inflammation, the Vascular Wall and Lesion Formation
  - Immunobiology of the Endothelium
  - The Adaptive Immune Response and Atherosclerosis
  - Innate Immunity and Lesion Formation
  - Immune Cell Recruitment and Atherosclerosis
- Inflammation, Immunity, Hypertension and Renal Disease
  - Innate and Adaptive Immune Mechanisms in Salt-Sensitive Hypertension
  - T Regulatory Cells, Renal Discourse and Hypertension
  - IL-17 and Hypertension
  - Immune Cells in Sodium-Sensitive Hypertension
  - Renal Inflammation and Renal Injury

For more info or to register, visit:
www.the-aps.org/inflammation
Access to current international peer-reviewed research is an essential element in enabling scientists, researchers, policy-makers and medical practitioners in developing countries to find local solutions to local health, environmental, social, economic, and food issues.

To answer this call, this journal is available free or at very low cost within institutions in more than a hundred of the world's poorest countries in partnership with the World Health Organization's HINARI initiative.

For more information visit www.who.int/hinari
